

COASTAL ORTHOPEDICS

Expert Orthopedic Care In Your Neighborhood

People are naturally concerned regarding the confusing and rapidly changing health-care environment. Coastal Orthopedic Associates, however, has remained a constant for over 35 years and committed to orthopedic excellence on the North Shore.

As medical technology and specialization have advanced, we have continued our commitment to cutting edge clinical excellence without sacrificing the personal attention and availability our patients and primary care physicians have grown to trust.

Coastal Orthopedics is one of the first to integrate musculoskeletal Ultrasound into its office practice. This imaging modality is noninvasive, emits no radiation and provides high resolution “real time” imaging of muscle, tendon, soft tissues and bone surfaces. Adding ultrasound to the practice has offered patients a rapid diagnosis at lower cost and in one office visit.

Patients on the North Shore expect high quality health care. Coastal Orthopedics provides specialized orthopedic care by Board Certified and Fellowship -trained surgeons. Subspecialties include: Sports Medicine, Trauma, Hand, Joint Replacement and Revision, Spine and arthroscopic surgery of the Knee, Shoulder, and Hip.

Surgical services are performed at Beverly Hospital where state-of-the-art instrumentation, advanced technology and caring staff completes the patient experience that North Shore residents

receive. Coastal Orthopedics is conveniently located on the campus of Beverly Hospital and in the new Orthopedic Center at BH in Danvers.
